

HEXAWARE

Overview

Hexaware is an IT service provider headquartered in Navi Mumbai, India. The company's SAP strategy is a two-pronged approach comprising digital transformation and hybrid AMS. Hexaware delivers SAP S/4HANA and S/4HANA Cloud digital transformation services, which include cloud adoption, system simplification and portfolio rationalization. It leverages its TRIADIC Platform and Automation Cost Takeout (ACT) frameworks and ID2E Automation suite for automation testing to deliver SAP S/4HANA business modernization and landscape transformations for midmarket clients, which contribute approximately 60 percent of the company's SAP S/4HANA revenue.

Strengths

TRIADIC Platform: Hexaware's TRIADIC Platform helps clients in their SAP S/4HANA digital transformation journey by assessing their company model and landscape complexity and offering the optimal path for an SAP S/4HANA transformation. The framework collectively reinforces the three dimensions of business model, landscape complexity and cloud appetite, and gives enterprises a choice between a single-step or multi-step approach to an SAP S/4HANA transformation.

Tools and accelerators: Hexaware has several proprietary tools to help in S/4HANA implementations. These include FITRITE for HANA readiness, CloudDataVirtualizer for virtualized virtualizing data management and storage, CloudMorphy for data migration, CloudtoCompliance for Data Masking & compliance, DATASAVE for moving archived data to Cloud, TALOS for autonomous regression testing, CONFORMIQ for business process assurance model, WATCH for monitoring system performance, analytics and traceability, and EZCOPY for automatic environment creation and provisioning. Also, Hexaware has developed industry solutions in Plant Maintenance – real-time IoT-based monitoring for manufacturing and logistics, and a real-time field asset management application.

Flexible pricing models: The company offers flexible pricing models, which include fixed price, time and material (T&M) and outcome-based pricing that converts capital expenses to operating expenses.

Caution

Hexaware should increase focus on integrating more advanced AI capabilities such as contextual analytics and predictive capabilities into its SAP and SAP S/4HANA services.

2021 ISG Provider Lens™ Leader

Hexaware's TRIADIC Platform, tools and accelerators accelerate the SAP S/4HANA business modernization and landscape transformation journey for midmarket clients in the U.S.
