Enhancing Hospital Digital Experience for Families of Oncology Pediatric Patients

For families facing a child’s cancer diagnosis, understanding complex treatment plans and medical details can be overwhelming. While pediatric hospitals provide essential treatment and medication schedules, these are often presented in scientific terms that are difficult for families to understand. Our client sought to implement a digital healthcare tool that would create a more supportive and accessible hospital digital experience for patients and families, enhancing their journey with interactive patient care solutions.

Hexaware’s Interactive Patient Care Solution for Oncology Support
 Hexaware developed an interactive patient care solution in the form of a digital tool designed to guide families through the different treatment phases. The tool provides a comprehensive, visually engaging timeline of the treatment plan, breaking down each phase with clear, step-by-step explanations.

By tailoring insights to each phase of treatment and a child’s personal experiences, the tool allows families to navigate the treatment journey with greater ease. This healthcare digital transformation aligns medical information with the practical needs of children and parents, offering a unique hospital digital experience that supports families on both medical and emotional levels.

Empowering Families with Digital Tools for Healthcare in Oncology

This digital healthcare tool Hexaware developed empowers families by:

- Visualizing treatment plans in a way that matches the understanding level of children and parents, helping them feel more informed and at ease.
- Providing actionable insights on integrating each phase of treatment into everyday life, supporting a smoother transition from hospital to home.
- Reducing stress and enhancing a sense of control, allowing families to focus on normality during challenging times.
