

Agentic AI-powered Incident Resolution Assistant for Data Engineers

Flyer

Do your DataOps teams find themselves wondering if this incident is a repeat occurrence? No more searching Confluence, Teams, Slack, etc., or digging through documents.

With an AI assistant, you can know in seconds.

“ Achieve 3X efficiency for incident management

How Agentic AI Works for DataOps Teams

Our resolution assistant enhances operational efficiency

Challenge	AI Agent's Role	What it Powers	How it's Used
Difficulty identifying if similar incidents have occurred before	Collects historical data to help searches	Instant searches using natural language to surface relevant cases and resolutions	Natural language search to ask questions like "Have we seen this error before?" or "Was this fixed last time?"
Data on events is fragmented across tools and teams	Centralizes critical incident knowledge	Unified insights from past incidents across systems, accessible via simple queries	Index historical incidents from tools like Jira, Slack, Confluence, PagerDuty, and more
Repetitive troubleshooting and wasted on-call effort	Keeps track of every incident recorded	Engineers get immediate access to previous fixes and context, right when it's needed	Reducing investigation time, minimizing repeat work, and preserving critical knowledge
Valuable insights hidden in documentation and SOPs	Delivers insights during live incidents	Dynamically match new incidents to historical cases and documented outcomes	Using recommendations on relevant past cases, actions taken, and outcomes needed

What Gets Better with an AI Assistant

As engineering teams grow and systems become more complex, we're seeing more incidents and challenges in managing them. Often, the lessons we learn from past incidents get lost across different tools and teams, making it harder to improve over time.

Here's where we see real opportunities:

- **Faster incident response** by using what we already know from past issues.
- **Fewer repeat problems** because teams can easily find and apply previous solutions.
- **Quicker on-call experiences** with quick access to relevant context and fixes.
- **Smarter incident reviews** using insights from past cases right when we need them.
- **High return on investment**—achieve up to 4.7X ROI in the first year.

The bottom line is that it helps solve problems faster and build stronger, more resilient systems.

Making Sure Data is Relevant, Accessible, and Secure

Our solution features that differentiate us

Chatbot	Dashboard	Responsible AI Guardrails
Indexes incident data from every tool, delivering context-rich answers, resolution steps, and audit logs	Unifies incident records for actionable insights, surfacing trends and KPIs to help teams improve responses	Applies filters and safeguards to block sensitive, harmful, or confidential data for ethical, secure, and compliant AI

Boost DataOps Incident Response Today

Discover how Hexaware leverages AI for operational efficiency within data engineering and AI initiatives. Contact us to learn more at marketing@hexaware.com.

About Hexaware

Hexaware is a global technology and business process services company. Every day, Hexawarians wake up with a singular purpose: to create smiles through great people and technology. With this purpose gaining momentum, we are well on our way to realizing our vision of being the most loved digital transformation partner in the world. We also seek to protect the planet and build a better tomorrow for our customers, employees, partners, investors, and the communities in which we operate.

With offices across the world, we empower enterprises to realize digital transformation at scale and speed by partnering with them to build, transform, run, and optimize their technology and business processes.
