

AI-powered MVP Delivery in One Week

Turn roadmap ideas into working products in days, not weeks

Flyer

The Challenge

Many organizations have valuable business ideas on their roadmap that are repeatedly deprioritized due to delivery pressure, competing priorities, and limited team availability. Even when there is an appetite to innovate, it is difficult to justify a conventional multi-week cycle for an early-stage idea.

Our Proposition

Hexaware's AI-accelerated product development methodology compresses what would typically take 4–6 weeks into just one week. Senior experts guide and orchestrate every step — taking you from a defined business problem to user-validated functionality, production-grade code, and a launchpad for AI-enabled product development across the organization.

“ Not just prototypes. Working software, validated functionality, and production-grade code.

How it Works

Build the Right Things

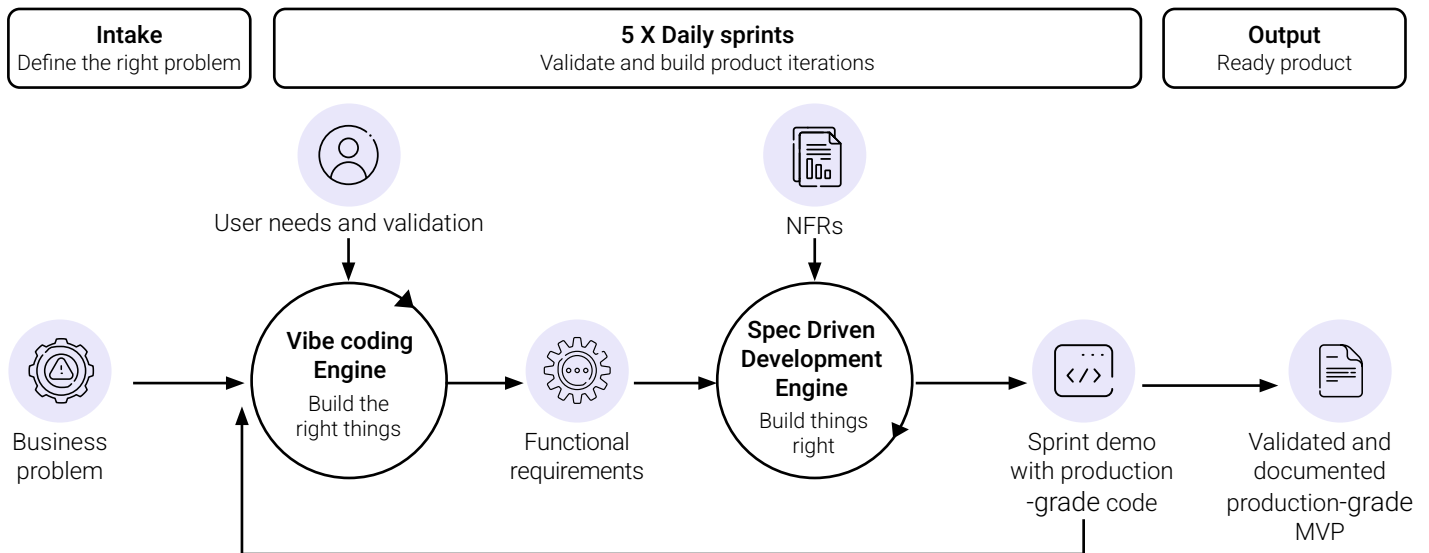

User-validated rapid prototyping with human orchestration.

- Rapid prototyping in hours, not days; AI-accelerated with structured prompting frameworks
- An experienced architect acts as the human bridge between users, stakeholders, and the AI engine — ensuring what gets built reflects real needs.
- Daily user validation loops to shape scope and confirm the product is heading in the right direction
- Prototypes feed directly into functional specs and production development

Build Things Right

Spec-driven AI development with embedded standards.

- Spec-driven AI development aligned with coding standards, security patterns, and compliance requirements
- Architectural guidance from seasoned senior experts — every design decision is human-validated, not just AI-generated
- Automated test generation (unit, integration, contract) and documentation delivered as part of the build
- Quality, security, and compliance controls embedded from the start, not added after the fact

Works Especially Well For

- Roadmap ideas with clear business value that keep losing priority to must-have work
- Initiatives where it is difficult to free up a full delivery team for multiple weeks
- Organizations that want to demonstrate AI value through tangible output
- Early-stage ideas that need fast validation before committing to a full-scale delivery investment

What We Need From You

- A defined business problem or innovation idea
- A small client team: product owner, end users, architect, and sponsor
- Relevant NFRs: coding standards, security guidelines, compliance requirements
- Availability for daily validation and feedback sessions

What Makes it Different

This is not just a prototype exercise. It delivers a working product, user-validated functionality, production-grade code, and supporting documentation. Something tangible that stakeholders can act on and teams can build from.

Real Delivery

Not concepts or mock-ups

Working software, functional specs, test coverage, and documentation — all in one week.

AI + Human Expertise

Speed with governance

AI acceleration combined with senior architects who steer decisions, validate output, and ensure enterprise readiness.

Strategic Stepping Stone

Beyond the MVP

A practical first step towards embedding AI-enabled practices across the organization's entire software lifecycle.

About Hexaware

Hexaware is a global technology and business process services company. Every day, Hexawarians wake up with a singular purpose: to create smiles through great people and technology. With this purpose gaining momentum, we are well on our way to realizing our vision of being the most loved digital transformation partner in the world. We also seek to protect the planet and build a better tomorrow for our customers, employees, partners, investors, and the communities in which we operate.

With offices across the world, we empower enterprises to realize digital transformation at scale and speed by partnering with them to build, transform, run, and optimize their technology and business processes.
