

Automated Power BI Estate Assessment for Microsoft Fabric

Know your estate, rationalize it, and migrate with confidence

Flyer

Most organizations can't say with confidence what's in their Power BI estate. Hexaware's accelerator scans every Power BI workspace, dataset, and report you own, and answers that shape your migration plan.

It shows what's actively used, what's idle, and where duplication or unnecessary complexity has crept in. That means migration decisions based on real usage, not assumptions. The result is a leaner, more focused environment in Microsoft Fabric.

What Hexaware's Accelerator Audits

Six questions we can answer about your Power BI estate

What do you have?

Get a complete inventory of workspaces, datasets, reports, refresh history, and users in a single run.

Who's using it?

See which reports were used in the last 30 days and who each report's top user is, by name, email, and department.

What will be hardest to migrate?

Identify your most complex datasets, scored by their tables, columns, measures, and relationships.

What can you retire?

Get a recommendation for every report (Keep, Monitor, Consolidate, Deprecate, or Investigate), along with the reason behind it.

Where are the duplicates?

Find reports built on similar data, group likely duplicates, and see which version is used most, so you know which one to keep.

What breaks if a source moves?

Trace affected datasets, reports, columns, and calculations to understand downstream impact.

What You Get

Three Excel workbooks, one for each audience

Estate Assessment for leadership and governance

KPI cards, top 10 most used reports, complexity heat maps, and a health snapshot of the whole estate.

Estate Analysis for analysts and engineers

The complete inventory, organized by sheet: every table, column, measure, relationship, refresh, and user.

Estate Rationalization for migration leads

A report-by-report view of each recommendation, the reason behind it, the report's top users, and which reports it could merge with.

How It Works in Six Steps

From the first scan to a finished plan, every stage is automated

Step 1	Step 2	Step 3	Step 4	Step 5	Step 6
Scan the entire estate Connect to your workspaces and pull in datasets, reports, refresh history, and usage.	Map report lineage Trace every report back to the exact source database, schema, and table it reads from.	Profile and score Score each dataset on complexity, using its tables, columns, measures, and relationships.	Assess usage and health Capture view counts, distinct users, last-opened dates, and refresh success.	Recommend action Assign each report a recommendation (Keep, Monitor, Consolidate, Deprecate, or Investigate) based on usage, duplication, and complexity.	Rationalize and consolidate Group reports that answer the same question so you can merge them into one.

What Sets the Accelerator Apart

Simplify Power BI migration with clarity, control, and less effort

Simple setup, full coverage Bring any workspace into scope with a one-line configuration change.	No tenant admin access required Run the assessment using standard workspace-admin permissions.	Every recommendation is explained See the data and usage signals behind every recommendation.
Understand people, not system IDs See users by name, email, and department instead of system IDs.	Built for migration scenarios See the downstream impact of each planned change before you make it.	Governance with no extra work Refresh the assessment anytime as your Power BI estate changes.

Ready to Migrate Your Power BI Estate?

Know what you have, what matters, and what to move, before migration begins. Talk to us about an estate assessment and an evidence-based plan for what to migrate, consolidate, and retire. Reach out at marketing@hexaware.com.

About Hexaware

Hexaware is a global technology and business process services company. Every day, Hexawarians wake up with a singular purpose: to create smiles through great people and technology. With this purpose gaining momentum, we are well on our way to realizing our vision of being the most loved digital transformation partner in the world. We also seek to protect the planet and build a better tomorrow for our customers, employees, partners, investors, and the communities in which we operate.

With offices across the world, we empower enterprises to realize digital transformation at scale and speed by partnering with them to build, transform, run, and optimize their technology and business processes.
