Professional Services

One Legal Data Foundation. Every Decision, Smarter

Hexaware builds a governed data layer that connects your legal systems, creates one language for the business, and makes enterprise AI trustworthy. At its core is a legal data model that gives matter, client, time, billing, and financials each a single, agreed definition.

The Practitioner Reality

Law firms don't lack data. They lack a common language for it.

Fragmented platforms and inconsistent definitions hide the signals firm leaders need. Misaligned terminology, hidden data lineage, and constant schema drift make the right matter or compliance data hard to find, so teams fall back on tribal knowledge. That affects:

- Matter profitability
- Cash flow and lockup
- Practice and timekeeper performance
- Compliance

The Missing Layer

A system of record exists. A governed legal data layer doesn't.

Legal data remains fragmented across Aderant, Elite 3E, iManage, Intapp, SAP, Clio, and similar systems.

Hexaware's proprietary, metadata-driven legal data model unifies data from these systems into a single view of matters, clients, time, billing, and financials.

Configuration-based data integration makes source onboarding up to 5x faster, while an automated data catalog makes firm-wide data discoverable and searchable.

HEXAWARE

What We Deliver

Hexaware Legal Data Intelligence: A domain-led, system-agnostic legal data foundation

- Built for how law firms work. The data model reflects how firms actually run matters, billing, and risk, not how any one vendor structures its software.
- One legal language. Matter, client, time, billing, and financials are defined once and used everywhere.
- Onboard sources up to 5x faster. A metadata-driven framework with universal executors and zero-copy federation means no more rebuilding pipelines for every new source.
- No rip-and-replace. It works with the platforms you already run, with no disruptive data integration project.
- Data discovery in business language. Users ask questions in plain English, not SQL. Intelligent scanning catalogs your data, and live lineage traces it from raw source to dashboard.
- Secured on arrival. Data governance tags in the catalog automatically drive attribute-based access control, row-level filtering, and PII masking, so you can widen access without widening exposure.

The Business Outcome

One foundation, four levels of value

01 Trusted KPIs: One version of matter and financial truth

02 Chat with Data: Answers grounded in traceable firm data and legal semantics

03 Predictive Intelligence: Earlier signals on leakage, lockup, and performance

04 Agentic AI-Ready: A governed foundation for AI for legal operations, secured by automated policies

12 Weeks to Working Value

Weeks 1–6	Weeks 7–12
• Discovery and assessment • Validated matter and billing models	• Source onboarding • Security setup • Working insights and prioritized data products

Ready to Build Your Legal Data Foundation?

Talk to Hexaware about a 12-week engagement that turns fragmented legal data into trusted KPIs and an AI-ready foundation.
